ACCOMMODATION OPERATIONS & HOUSEKEEPING PERFORMANCE

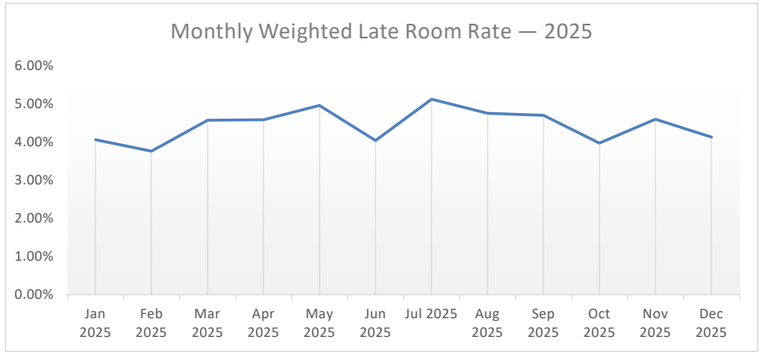

2025 Performance Overview | Synthetic Data

Annual Occupancy Rate	Rooms per Labour-Hour
70.01%	1.22

Annual Late Room Rate	First-Pass Inspection Rate
4.43%	93.59%

Key Findings and recommendations

1. Occupancy Performance

Finding: March recorded the highest monthly occupancy rate at 78.15%, while November recorded the lowest at 64.50%%, a difference of 13.65 percentage points.
Recommendation: Review seasonal demand, booking patterns and room availability to support more effective staffing and housekeeping planning.

2. Housekeeping Productivity

Finding: March recorded the highest productivity at 1.32 rooms per labour-hour, compared with 1.13 in November.
Recommendation: Investigate differences in staffing levels, room workloads, room types and operational delays to identify opportunities to improve productivity.

3. Late Room Performance

Finding: July recorded the highest late-room rate at 5.11%, while February recorded the lowest at 3.75%, a difference of 1.36 percentage points.
Recommendation: Review July's daily operational records, checkout volumes, staffing and maintenance delays to identify possible contributors to late room completion.

4. First-Pass Inspection Quality

Finding: March recorded the highest first-pass inspection rate at 94.86%, while November recorded the lowest at 92.60%, a difference of 2.26 percentage points.
Recommendation: Review inspection failures and rework patterns to identify opportunities to improve cleaning quality and reduce repeat work.

Data note: This project uses a synthetic accommodation operations dataset for analytical practice. Findings describe patterns in the generated data and should not be interpreted as evidence about a real hotel.
